Enzymix

Customs declaration product Enzymix

To whom it concerns,

Enzymix capsules contain a combination of 9 digestive enzymes: Amylase, Protease, Alpha Galactosidase, Lipase, Gluco-amylase, Lactase, Cellulase, Maltase and Invertase. In addition, the capsules contain calcium carbonate (filling aid) and HPMC (hydroxypropylmethylcellulose) as the capsule material.

Enzymix is a food supplement that contains a broad combination of digestive enzymes to support the digestion of various nutrients from food, including carbohydrates, fats and proteins. The different enzymes help break down specific nutrients, such as lactose, complex carbohydrates, starches, sugars, fats and proteins.

When certain nutrients are not digested properly, this can lead to digestive complaints such as bloating, abdominal discomfort, gas or diarrhoea. By taking Enzymix with a meal, the enzymes can support the natural digestive process and help the body digest a wider range of nutrients. Enzymix meets the requirements for food grade enzymes.
