Fodmix

Customs declaration product Fodmix

To whom it concerns,

Fodmix capsules contain a combination of 4 digestive enzymes: Lactase, Alpha Galactosidase, Xylose Isomerase and Invertase. Besides this, the capsules contain calcium carbonate (filling aid) and HPMC (capsule).

Fodmix is a food supplement which helps to digest the carbohydrates (sugars): Lactose, Fructose, Sucrose and Oligosaccharides. After consuming those carbohydrates, people with intolerances for those carbohydrates will develop complaints such as nausea, bloating and diarrhoea. When taking Fodmix these abdominal complaints are prevented.

Fodmix meets the requirements for food grade enzymes.

With kind regards,

Rosanne Holman
