Customs declaration
Lipase mix

Customs declaration product Lipase mix

To whom it concerns,

Lipase Mix capsules contain a combination of 3 digestive enzymes: Lipase, Amylase and Protease. In addition, the capsules contain calcium carbonate (filling aid) and HPMC (hydroxypropylmethylcellulose) as the capsule material.

Lipase Mix is a food supplement that supports the digestion of fatty meals. The main enzyme in Lipase Mix is lipase, which helps break down fats into smaller components that can be absorbed by the body. In addition, the capsules contain amylase and protease to support the digestion of carbohydrates and proteins, making Lipase Mix suitable for a broader range of meals.

When certain nutrients are not digested properly, this can lead to digestive complaints such as bloating, abdominal discomfort, gas or diarrhoea. By taking Lipase mix with a meal, the enzymes can support the natural digestive process and help the body digest a wider range of nutrients.

Lipase mix meets the requirements for food grade enzymes.
